

KARAN JANGID

.NET Team Lead · ASP.NET Core · Azure | Jaipur, Rajasthan, India
+91-9529345705 | karanjangid80@gmail.com | linkedin.com/in/karanjangid80 | github.com/kajangid

PROFESSIONAL SUMMARY

Senior .NET engineer with 6 years of experience building web platforms on ASP.NET Core, SQL Server, and Azure, including multi-tenant public-sector systems and a long-running sports management platform. Led teams of 5–6 from architecture through delivery, mentored 7–8 interns, and migrated legacy applications to modern .NET. Experienced with Stripe subscription payments, SQL query optimization, and CI/CD with Docker and Azure DevOps.

TECHNICAL SKILLS

- **Backend:** C#, .NET 8 / .NET Core, ASP.NET Core Web API & MVC, EF Core, Dapper, NPoco, Clean Architecture, CQRS, RESTful APIs, Hangfire, Swagger
- **Data:** MS SQL Server, query optimization, stored procedures, indexing
- **Integrations:** Stripe (subscriptions, webhooks), Google Maps, Trustpilot API, third-party REST/WCF APIs
- **Cloud & DevOps:** Azure DevOps (multi-stage CI/CD), Docker, Azure Container Registry, Azure Entra ID / Azure AD, Key Vault, Blob Storage, Application Insights
- **Frontend:** React 18, Redux, JavaScript, jQuery, HTML5/CSS3, Umbraco CMS
- **Practices:** Unit testing (xUnit), code review, Agile/Scrum, technical mentoring

PROFESSIONAL EXPERIENCE

- | | |
|---|---------------------|
| Sumedha Softech Pvt. Ltd., Jaipur | Sep 2021 – Feb 2026 |
| Dot Net Team Lead | Oct 2023 – Feb 2026 |
| Software Engineer | Sep 2022 – Oct 2023 |
| Dot Net Developer | Sep 2021 – Sep 2022 |
| <ul style="list-style-type: none">• Led technical delivery of a three-module, multi-tenant case management platform (.NET 8, React 18, Azure) and a long-running combat sports management platform (ASP.NET MVC, Stripe, Hangfire), from architecture and planning through delivery, with teams of 5–6.• Migrated legacy applications to modern .NET: a real estate platform (MVC 5 app and Web API → .NET Core 7) and the sports platform (.NET Core 3.1 → .NET 5 → .NET 8), keeping all features running.• Built multi-stage Azure DevOps CI/CD pipelines with Docker, Azure Container Registry, Key Vault secrets, automated database migration bundles, and client-approved release gates.• Integrated Azure Entra ID / Azure AD, Key Vault, Blob Storage, and Application Insights, and applied GDPR practices such as PII-masked logging with retention policies.• Optimized SQL Server queries and stored procedures using execution plans and SQL Profiler, and used Dapper for performance-critical data access.• Delivered an Umbraco CMS website and a Planday–Zenegy payroll integration (Dapper, hand-tuned SQL, stored procedures).• Ran client meetings, planning, estimation, and team scrums; reviewed code, set architecture standards, and mentored 7–8 interns. | |
| Web Developer | Aug 2018 – Feb 2020 |
| <i>TravelTech Software, Jaipur</i> <ul style="list-style-type: none">• Built a CMS and enquiry-management portal for a destination wedding travel website with ASP.NET MVC 4, C#, and jQuery, and integrated the Trustpilot API to show verified customer reviews.• Built a scheduled service that pulled destination data from external APIs and generated automated ROI reports, saving the data-entry team 3–4 hours of manual work per day.• Built a cruise booking enquiry platform from scratch on .NET Core 3.0 (ASP.NET Core Identity, EF Core code-first, layered architecture); the client cancelled it before release.• Built a destination search and listing page for a travel booking site (jQuery, ASP.NET AJAX UpdatePanel) and consumed a third-party WCF service for availability and pricing. | |

KEY PROJECTS

Combat Sports Management Platform

Aug 2024 – Feb 2026

Dot Net Team Lead & Backend Developer (concurrent with Case Management Platform)

C#, ASP.NET MVC (.NET 8), NPoco, CQRS, Hangfire, Stripe, SQL Server, Azure · live in production since 2018 · client name withheld

- Led a team of 5 (3 developers, 1 QA, 1 designer) on a single-organization platform that manages clubs, federations, events, and tournaments for fighters, club teams, and a super admin.
- Found the root cause of random Hangfire failures that caused missed subscription invoices and unbilled custom subscriptions: a dev-upgrade environment shared the production Hangfire connection string. Fixed the configuration and introduced environment-documentation and connection-string rules, which led to appointment as project lead.
- Upgraded the Stripe SDK from a 2020 version to v50.x and reworked the payment flow for EU card-payment compliance after Stripe removed legacy token-based card validation, covering 7 subscription flows and 2 one-time payment flows without changing core business logic.
- Restructured subscription and registration flows (multiple subscription types per club, multiple accounts, prices, and products) and fixed duplicate and lost payments, with fewer payment issues reported at peak 1st-of-month renewals.
- Led the .NET Core 3.1 → .NET 5 → .NET 8 migration, replacing incompatible packages and moving from LightInject to the built-in .NET container; the client confirmed the application was faster.

Case Management Platform for Public-Sector Clients

Oct 2023 – Dec 2025

Dot Net Team Lead & Backend Developer

C#, .NET 8, ASP.NET Core Web API, EF Core, SQL Server, React 18, Node.js, Azure, Docker, Azure DevOps, Seq, xUnit

- Owned architecture for a three-module platform for public-sector case managers handling environmental and construction cases, using one database with a tenant ID column and EF Core global query filters for tenant isolation.
- **Case Management System** (API + React dashboard, team of 6): step-by-step case workflows, document storage in private per-tenant Blob containers, Seq logging, in-memory caching, and pagination. Still in development.
- **Case Status API** (live since 2025, 5 tenants, 20–30 pilot users): led status retrieval logic and per-tenant API credentials, wrote targeted xUnit tests, and built a two-stage Azure DevOps pipeline with ACR image publishing and migration bundles.
- **AI chatbot** (React + Node.js, live since 2025, 6 tenants, about 45–50 weekday pilot users): set up Azure AD authentication, per-tenant routing, and dynamic tenant UI.
- Applied GDPR practices: PII-masked logs with 1- and 3-month retention, no team access to staging or production, and release approval by the client's CTO.

Real Estate Platform

Feb 2022 – Sep 2023

Dot Net Developer, then Software Engineer

ASP.NET MVC 4/5, .NET Core 7, Clean Architecture, EF Core, Dapper, ASP.NET Identity, Hangfire, SQL Server, Google Maps

- Sole developer on a property listings platform (search, property history, agent enquiries and flyers) with one MVC 5 app, one MVC 4 admin app, a Web API for mobile apps, and about 30 console apps for background tasks.
- Led the migration of the MVC 5 app and Web API to .NET Core 7 with Clean Architecture, replacing hand-written ADO.NET with EF Core and Dapper, and rebuilt the console-app tasks as Hangfire jobs (built, not deployed).
- Moved authentication from ASP.NET Membership to ASP.NET Identity.
- Optimized a 5+ table search query from about 1–2 s to about 650 ms–1.6 s, and cut several background queries from about 5–9 s to about 1–2 s.
- Built map search with Google Maps clustering, showing property counts per map tile based on active filters.

EDUCATION

- MCA, S S Jain Subodh PG College, Jaipur | 2019 – 2021
- BCA, S S Jain Subodh PG College, Jaipur | 2015 – 2018

HONORS & AWARDS

Trailblazing Leadership Award (2025) · Stand Out Performer Award (2024) · Emerging Star Award (2022), Sumedha Softech
